

# CONTENTS

## 1. INTRODUCTION

1-26

Importance of Plant Diseases, Scope and objectives of plant pathology, Objectives of Plant Pathology, What is health ?, History of Plant pathology with special reference to Indian works, Definition and terms, Concept of Plant Disease, Causes of Plant Diseases, Classification of plant diseases, Disease, How Pathogens affect Plants, Fastidious vascular bacteria, B1: Rickettsia (RLO), Reproduction of Mycoplasma, Reproduction of Fastidious bacteria, Phytplasma, Spiro- plasma, Taxo- nomic Position, Algae, Reproduction, Important Algae causing diseases, Viroids, Terminology, Replication, Protozoa, Phanerogamic Plant Parasites, Dodder (Cuscuta, Love-vine and Amarbel), Giant mistletoe (Loranthus or Banda), Broomrape (Orbanche or Tokra), Witchweed (Striga or Turfula or Talop), Diseases and symptoms due to abiotic causes, Adverse weather conditions, Temperature, Humidity, Atmospheric gases, Light, Adverse properties of the growing medium, Diseases due to nutrient deficiencies, Diseases due to excess nutrients (toxicities), Important abiotic diseases and their symptoms due to nutrient deficiencies

## 2. FUNGI

27-91

Fungi. General characteristics of fungi, Definition of fungi, Hyphae, Somatic Structures, Appressoria, Thallus, Heterothallism and Homothallism, Types of Thallus, Modification of Mycelium or Thallus, Different forms of mycelium/Aggregation of fungal mycelium: (Fungal tissues), Reproduction in fungi, Sexual reproduction, Planogametic copulation, Classification of Fungi, Taxonomy and Nomen- clature, Taxonomy and units of Classification upto order levels, Various classifications, Myxomycetes, Reproduction, Sporulation and Sporophoresm, Plasmodium, Mastigomy- cotina, Order-Chytridiales (lowest fungi), Economic importance, Order: Blastocladales, Class Oomycetes is divided into four orders, Paragynous arrangement of oogonium and antheridia in Pythium, Sporangia columellate, Columellate

sporangia accompanied by sporangiola, Sporangia non-columellate, Family : Sphaeropsidaceae, Ascomycotia (Sac fungi), Developing ascoma, Types of asci, Key to the classes of Ascomycotina (divided into six class), Class: Hemiascomycetes, Class : Plectomycetes, Class-Pyrenomycetes, Class: Hypocreals, Order: Helotiales, Basidiomycotina, Key to the classes of Basidiomycotina (Ainsworth, 1973), Genus: Hemileia, Subclass- Holobasi- diomycetales, Order: Exobasidiales, Family: Brachybasidiaceae, Order: Dacrymycetales

**3. BACTERIA AND MOLLICUTES**

92-106

Bacteria and Mollucutes, Bacteria, Introduction, Definition, Shape of bacteria, General characteristics of bacteria, Mureins, Cell walls of gram negative bacteria, Cell walls of gram positive bacteria, Capsule, Cytoplasmic membrane, Cytoplasm, Ribosomes, Mesosomes, Cytoplasmic Inclusions, Nucleus (Genophore), Plasmid, Appendages, Flagella, A flagellum has three basic parts, Pili (Fimbriae), Food reservoirs, Bacterial Classification, Reproduction in bacteria, Sexual reproduction or Genetic recombination in bacteria, Bergey's Manual of Systematic Bacteriology (First Edition), Phenetic Classification, Bergeys manual of systematic bacteriology (second edition) phylogenetic classification, A concise account of the classification, Volume II The Proteobacteria, Volume III : The low G+C gram positive bacteria, Volume IV; The high G+C gram positive bacteria, Volume V: The Plantomycetes, Spirochaetes, Fibrobacters, Bacteroidetes and Fusobacteria, Mollicutes

**4. VIRUSES**

107-122

Viruses, Introduction, Chemical composition, Morphology, Composition and Structure, Composition and Structure of Viral Protein, Composition and Structure of Viral Nucleic Acid, Satellite Viruses and Satellite RNAs, Helper virus and their examples, Replication of plant viruses, Host function used by plant viruses, Sites for multiplication, Nucleic acid synthesis, Viral Genome Expression, Mechanism of Replication, Entry, Uncoating of Virus Particle, Replication of genome, Replication of Lettuce necrotic yellow virus (-ssRNA Rhabdovirus), Replication of wound tumor virus (dsRNA), ssDNA Replication: (Gemini viruses), Replication of ds DNA (Cauliflower mosaic virus), Virus Protein Synthesis, Assembly Of New Virion, Movement of Plant Viruses,

	Transmission, Transmission of Viruses, Vegetative Propagation, Mechanical Transmission of Viruses through Sap, Seed Transmission, Pollen Transmission, Insect Transmission, Mite Transmission, Nematode Transmission, Fungus Transmission, Dodder Transmission or by phanergamous plant/parasites	
<b>5.</b>	<b>PLANT PARASITIC NEMATODES</b> Introduction, General morphology of nematodes, Reproduction, Classification of Phytonematodes, Classification of nematodes, Symptoms and nature of damage caused by nematodes, I. Symptoms produced by above ground feeding nematodes, Symptoms produced by below ground feeding nematodes, Above ground symptoms, Below ground symptoms	<b>123-134</b>
<b>6.</b>	<b>DISPERSAL AND SURVIVAL OF PLANT PATHOGENS</b> Dispersal of Plant Pathogens, Autonomous or direct or active dispersal, Seed as the source of autonomous dispersal, Passive or Indirect dispersal, Animate agents, Fungal transmitted viruses, Nematode transmitted viruses, inanimate agents, Survival of Plant Pathogens, Sources of Survival of Pathogens, Infected host as reservoir of inoculum, Saprophytic survival outside the host, Survival as dormant spores or specialized resting structures, Soil borne fungi, Seed borne fungi, Survival in association with insects, nematodes and fungi	<b>135-144</b>
<b>7.</b>	<b>TYPES OF PARASITISM AND VARIABILITY IN PLANT PATHOGENS</b> Types of parasitism. Variability in Plant Pathogens, Mechanisms of Variability, Terminology, Variability in plant pathogens, Mutation, Recombination, Heterokaryosis, Paras- exualism, Heteroploidy, Variability in bacteria, Variability in viruses :	<b>145-149</b>
<b>8.</b>	<b>PATHOGENESIS</b> Development of Disease in Plants, Chain of Infection, Stages in the Development of Disease, Pre-penetration Phenomena, Attachment of Pathogen to Host, Spore Germination and Perception of the Host Surface, Recognition between Host and Pathogen, Germination of Spores and Seeds, Hatching of Nematode Eggs, Penetration, Direct penetration through intact plant surfaces, Breakdown of physical barriers, Breakdown of	<b>150-156</b>

	chemical barriers, Indirect Penetration through Natural Openings, Stoma, Lenticels, Growth and development (Colonization), Growth and Reproduction of the Pathogen, Exit of Pathogen, Overwintering and over summering of pathogen	
<b>9.</b>	<b>ROLE OF ENZYMES, TOXINS AND GROWTH REGULATORS IN PLANT DISEASES DEVELOPMENT</b> Role of Enzymes In Plant Diseases Development, Role Of Toxins In Plant Diseases Development, Toxin hypothesis, Classification of toxins, Effect of toxins on host tissues, Role Of Growth Regulators In Plant Diseases Development, Growth regulators, Growth promoting substances, Growth inhibiting substances	<b>157-163</b>
<b>10.</b>	<b>DEFENSE MECHANISM IN PLANTS</b> Defense Mechanisms: pre-existing or passive, Pre-existing structural defense structures, Post-infectious structural defense mechanisms/Induced structural barriers, Cellular defense structures, Pre-existing chemical defenses, Inhibitors released by the plant in its environment, Inhibitors present in plant cells before infection, Post infectious or induced defense mechanisms, Hypersensitive response (HR), Cellular responses during HR	<b>164-169</b>
<b>11.</b>	<b>PLANT DISEASE EPIDEMIOLOGY : FACTORS AFFECTING DISEASE DEVELOPMENT</b> Based on the mode of multiplication of pathogen, the disease are classified in two types, Simple interest disease/ Monocyclic, Host factors, Pathogen factors, Patterns Of Epidemics	<b>170-174</b>
<b>12.</b>	<b>PRINCIPLES OF PLANT DISEASE MANAGEMENT</b> Essential considerations in plant disease Management, Information is needed on the following aspects, General principles of plant disease management, Physical Methods, Biological methods, Mechanisms of biological control, Biocontrol agents for the management of plant pathogens, Biocontrol agent Pathogen/disease, Biocontrol agent Nematode, Important fungal biocontrol agents, Important bacterial biocontrol agents, Plant growth promoting Rhizobacteria (PGPR), Protection	<b>175-182</b>

13.

**FUNGICIDES**

183-227

Classification Of Fungicides Based On Chemical Nature, Fungistat, Antisporulant, Characters of an ideal fungicide, Classification of Fungicides, I. Based on mode of action, Protectant, Therapeutant, Eradicant, Based on general uses, Based on Chemical Composition, Preparatory Copper Fungicides, Copper sulphate preparations, Boreaux Mixture, Bordeaux paste, Burgundy mixture, Cheshunt compound, Copper carbonate preparatio, Chaubattia Paste, Proprietary copper fungicides or Fixed or insoluble copper fungicides, Sulphur Fungicides, Inorganic Sulphur Fungicides, Organic Sulphur Compounds, Hetrocyclic Nitrogenous Compounds, Miscellaneous Fungicides, Systemic Fungicides, Fungicides Formulations, Liquid Formulations, Common Liquid Formulations, Emulsifiable Concentrate (E or EC), Solutions (S, CS), Emulsions in Water (EW), Flowables (F, L, or SC), Dry Formulations, Granules (G), Wettable Powders (WP or W), Soluble Powder (SP or S), Antibiotics, Antibacterial antibiotics, Streptomycin sulphate, Tetracyclines, Antifungal antibiotics, Aureofungin, Griseofulvin, Cycloheximide, Blasticidin, Antimycin, Kasugamycin, Thiolution, Endomycin, Bulbiformin, Nystatin, Eurocidin, Methods of allocation of fungicides, Seed treatment, Mechanical method, Chemical methods, Dry Seed Treatment, Wet seed treatment, Seed dip / Seed soaking, Seedling dip / root dip, Rhizome dip, Sett dip / Sucker dip, Slurry treatment (Seed pelleting), Special method of seed treatment, Soil treatment, Soil drenching, Broadcasting, Furrow application, Fumigation, Chemigation, Foliar application, Spraying, Dusting, Post – harvest application, Special method of applications, Trunk Application/Trunk Injection, Root Feeding, Pseudostem Injection, Corn Injection, Paring and Pralinage
