

CONTENTS

- 1. History and Development of Soil Science** **1-6**
Contribution made by, Van Helmont, Woodward, Boussingault, Laws & Gilbert, Liebig Hilgard, Dokuchaiev, Glinka, Jenny Leather, Scholasky, Mukharjee, Ramamoorthy, Scope of soil science, Approaches of soil study.
- 2. Evolution and Structure of Earth** **7-12**
Evolution of earth, Divisions of the earth's sphere, Composition of the earth's crust.
- 3. Rock Forming Minerals** **13-21**
Definition, Classification of minerals, General properties of minerals, Important soil forming minerals.
- 4. Soil Forming Rocks** **22-29**
Formation and classification of rocks, Igneous rocks, Sedimentary rocks, Metamorphic rocks, Rock cycle.
- 5. Weathering of Rocks and Minerals** **30-39**
Weathering processes, Physical weathering, Chemical weathering, Biological weathering, Weathering at a glance, Components of soil.
- 6. Soils Formation—Factors and Processes** **40-56**
Soil forming factors, Passive soil forming factors, Active soil forming factors, Soil forming processes, Fundamental soil forming processes, Specific soil forming processes, Development of soil profile, Soil individual or polypedon.
- 7. Soils Texture and Structure** **57-69**
Soil texture—Stokes's law, Classification of soil separates, Characteristics of soil separates, Soil textural classes, Determination of textural class, Importance of soil texture, Soil structure, Formation of soil structure, Mechanism of aggregate formation, Classification of soil structure, Factors affecting soil structure, Effects of soil structure on soil properties, Importance of soil structure.
- 8. Other Physical Properties of Soil** **70-80**
Surface area, Density of soil, Pososity of soil, Factor affecting soil porosity, Soil colour, Soil consistence.
- 9. Soil Air and Soil Temperature** **81-89**
Soil air—Composition of soil air, Factors affecting composition of soil air, Importance of soil aeration, Soil temperature-sources of soil heat, Absorption and loss of solar energy, Movement of soil heat and temperature changes, Control of soil temperature, Factors affecting soil temperature, Effects of soil temperature on soil and plant growth.
- 10. Soil Collids** **90-102**
General properties of soil colloids, Types of soil colloids, Layer silicate clays, Iron ad aluminum oxide clays, Allophanes and amorphous minerals, Humus.
- 11. Ion Exchange** **103-111**
Cation and anion adsorption, Mechanism of cation exchange, Cation exchange capcity, Means of expression of cation exchange, Percent base saturation, Importance of cation exchange, Anion exchange-anion adsorption, Source of positive charges, Anion exchange capacity, Importance of anion exchange.
- 12. Soil Reaction** **112-124**
Concept of H ion concentration, Soil reaction, Method of expressing acidity or alkalinity, Soil acidity, Buffering and soil reaction, Importance of

buffering in agriculture, Factors controlling soil reaction, Influence of soil reaction on availability of nutrients.

- | | |
|--|----------------|
| 13. Soil Solution | 125-129 |
| <i>Composition of soil solution, Factors affecting soil solution, Importance of soil solution.</i> | |
| 14. Soil Organic Matter | 130-144 |
| <i>Sources of soil organic matter, Factors affecting soil organic matter, Composition of plant residues, Decomposition of soil organic matter, Factors affecting decomposition, Role of organic matter, Humus formation, Properties of humus, Clay humus complex, Carbon nitrogen (C : N) ratio, Significance of C : N ratio.</i> | |
| 15. Soil Water | 145-161 |
| <i>Importance of soil water, Retention of water by soil, Factors, affecting on soil water, Soil water potential, Methods of expressing suction, Measuring of soil moisture, Soil moisture tension curves, Classification of soil water, Biological classification of soil water, Soil moisture constants, Entry of water in to soil, Soil water movement-saturated and unsaturated.</i> | |
| 16. Salt Affected Soils | 162-174 |
| <i>Nature and classification of salt affected soils, Characteristics of salt affected soils, Formation of saline and alkaline soils, Deterimental effects of salinity and alkalinity, Reclamation of saline and alkali soils, Calcareous soils—classification and formation, Characteristics of calcareous soils, Effects of calcareous soils on plant growth, Management of calcareous soils.</i> | |
| 17. Acid Soils | 175-184 |
| <i>Nature of soil acidity, Formation of soil acidity, Classification of soil acidity, Effects of soil acidity on plant growth, Management of acid soils, Lime requirement of acid soils, Beneficial effects of liming material on soil, Chemistry of submerged soils, Changes occurring in a submerged soil.</i> | |
| 18. Quality of Irrigation Water | 185-190 |
| <i>Total concentration of soluble salts, Relative proportion of sodium, Concentration of boron, Concentration of bicarbonate, Classification of irrigation water, Plant tolerance to salinity, exchangeable Na and B.</i> | |
| 19. Soil Survey | 191-199 |
| <i>Purposes of soil survey, Methods of soil survey, Types of soil survey, Importance of soil survey, Land Capability classification.</i> | |
| 20. Soil Classification | 200-216 |
| <i>Purposes of classification, Evolution of soil classification system, Recent system of soil classification, Comprehensive system of soil classification, Structure of soil taxonomy, Diagnostic horizons of minerals soils, Soil moisture regimes, Soil temperature regimes, Soil orders.</i> | |
| 21. Soils Erosion and Conservation | 217-222 |
| <i>Effects of soil erosion, Types of soil erosion, Loss of nutrients, Soil conservation.</i> | |
| 22. Soil Biology | 223-239 |
| <i>Soil fauna, Bacteria, Fungi, Actinomycetes, Algae, Protozoa, Viruses</i> | |
| 23. Soils in India | 240-252 |
| <i>Different soil groups of India, Soils of Maharashtra—Western Konkan coast region soils, Western Ghat region soil, North Deccan Maharashtra Plateau soils, Soil Distribution in Maharashtra</i> | |
| Glossary | 253-272 |
